

Identity FastTrack™

Implement SailPoint Identity Security
faster with Identity FastTrack from
Regatta Solutions Group

Whether you're just starting a new initiative or evolving your identity and access management program forward, implementing identity solutions requires an investment of time and resources. Regatta Solutions Group has developed the proprietary FastTrack methodology founded on a deep working knowledge of the SailPoint Identity Security platform to ensure your identity program is set up for success starting on Day 1.

ONBOARD APPLICATIONS 2X FASTER

Assess and onboard applications
more efficiently

ENHANCED DEVELOPER PRODUCTIVITY

Identify, drive, measure and
continuously improve
applications development

FASTER TIME TO RESULTS

Improved visibility with insights
and overall clarity

LONG-TERM VALUE

Achieve and surpass identity
security goals with efficiencies
programmed into the
Identity Factory

GREATER ROI

Quickly build executive team
confidence and support for your
IAM projects

ACCELERATE ROI FOR SAILPOINT IMPLEMENTATIONS

The key to identity success is to align your people and processes with your selected IAM technology platform and efficiently integrate it with your enterprise applications. Regatta's innovative Identity FastTrack framework was designed to do just that by focusing on SailPoint IdentityIQ and SailPoint IdentityNow implementations in even the most complex enterprise environments.

TAKE SAILPOINT IDENTITY SECURITY TO NEW HEIGHTS

SailPoint customers who are just getting started or who find themselves tangled up in a heavy implementation lift might find it more difficult to quickly and easily identity-enable their applications. Regatta's team of certified SailPoint experts can help organizations move faster and achieve more with SailPoint at a far lower cost.

Identity FastTrack has been developed and proven exclusively by Regatta Solutions Group as the culmination of experience working on more than 1,000 SailPoint IdentityIQ implementations. By combining our proven methodology with identity security best practices, Identity FastTrack can streamline any SailPoint implementation, migration, or evolution by helping you focus on achieving a faster time to value and ultimately minimizing identity security risk.

ESTABLISH AN IDENTITY BASELINE

By using the Identity FastTrack framework, Regatta can quickly analyze your IAM environment, processes, and tools to start delivering real results.

Access Insights allow every SailPoint customer to harness the power of SailPoint's AI platform at the beginning of their implementation, rather than layer on AI Services after deployment. With Access Insights, you'll be able to answer critical questions such as:

- Who received access to what?
- What changes are taking place over time and why?
- Is there any questionable access lurking as an outlier within the organization?
- What common access exists to help speed and ease the burden of initial access modeling, data cleanup, etc.?

A HELPFUL TIP

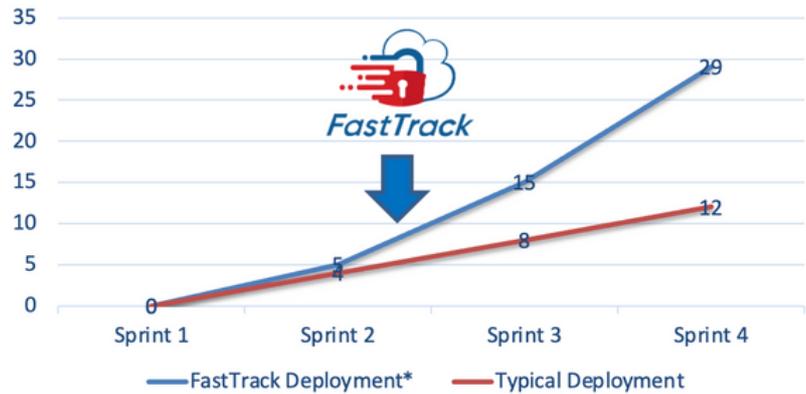

Gaining initial Access Insights early on allows you to take advantage of the additional AI modules in the Access Modeling and Recommendations phase of implementation. Regatta can help you get started using SailPoint AI Services from the beginning.

LEVERAGE AGILE PROJECT MANAGEMENT

After gaining a complete understanding of your IAM ecosystem, Regatta works within an agile project management approach known as **Agile Identity Workflow™**. By utilizing and incorporating the agile project methodology and engine into the development process, organizations can achieve results rarely attainable with traditional project management methods.

Allowing application assessments and developments to be done in parallel keeps developers fully utilized – saving time and money. This agile system results in a more grounded approach for IAM projects than standard waterfall programs as it keeps the team progressing on application integrations, even if one integration becomes an issue.

Cumulative Applications Onboarded

*Source: Fast Track Client

Upon completion of an expert assessment of enterprise identity security processes, Regatta can build a program roadmap to get your executive team on board. This roadmap allows for developing an agile IAM development environment that can redeploy existing tools to help leverage your existing investments.

BUILD AN IDENTITY FACTORY

Establishing a state-of-the-art identity factory with Regatta ensures a higher rate of productivity, faster application integration, and greater visibility of key metrics.

THE NEED FOR SPEED

Regatta's Identity FastTrack onboards applications 2X faster than traditional efforts.

Organizations can leverage the identity factory to integrate and operate identity-enabled applications that optimize key processes and configuration of existing tools. Regatta's innovative approach is proven to deliver a **more efficient application onboarding rate 2X faster than traditional efforts.**

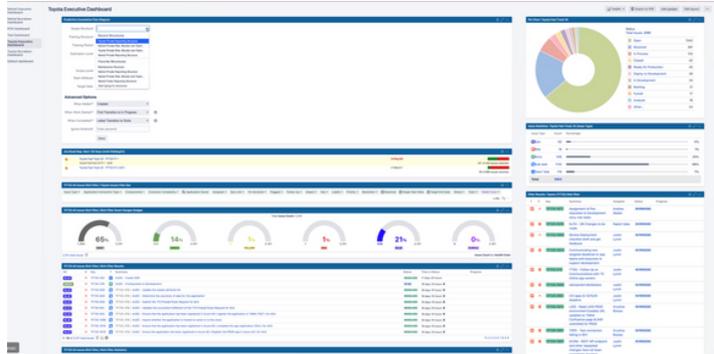

We work together with your organization to onboard apps, roles, and policies into SailPoint IdentityIQ and IdentityNow, as well as implement innovative tools for role and policy import, testing, and more.

GAIN TRANSPARENCY WITH IDENTITY DASHBOARDS

Once your identity management program is live, Regatta can create customized dashboards that make it easy to track and share delivery and project metrics. Sharing metrics and impact allows organizations to demonstrate measurable progress and makes it easy to proactively gain security and compliance insights.

Regatta Identity Dashboards help monitor key metrics, including:

1. Application onboarding rate
2. Story points per developer
3. Number of apps/workflows
4. Risks and key decisions

CREATE A PATH TO INDEPENDENCE

Using Regatta as an implementation partner also ensures you have a clear roadmap for your team to be confidently capable of managing IAM. We partner with you to drive measurable, rapid results and enable your internal teams to be self-sufficient by establishing a path of independence for the future.

Training includes:

1. Administrator training
2. End user training
3. Implementer training
4. Co-delivery and handoff to client implementers

EXPEDITE YOUR RESULTS BY GETTING STARTED WITH REGATTA

Our SailPoint experts are ready to thoroughly evaluate your organization's identity security requirements to discover areas for improvement and deliver a roadmap to enable your SailPoint deployment for future growth.

Uplevel your SailPoint Identity Security implementation and achieve the results you envisioned faster and more effectively with Regatta. Learn more at www.regattasg.com/fasttrack.
